Specifically moving a file from a folder into a sub-folder that is just above it. For example, if file foo.xml is in the root of the filesystem, and the sub-folder bar is at the same level as foo.xml, then I want to be able to move foo.xml from the root to the bar folder. I am wondering if I can use this: move foo.xml bar/ So is there a way to prevent the move from creating a second bar folder and placing the file there? I know I can use copy foo.xml bar/ but it creates a second bar folder, which I don't want. And the MOVE command I have already displays an error if the file already exists in the target folder. A: So is there a way to prevent the move from creating a second bar folder and placing the file there? No. Windows cannot do this. You're not trying to copy or move a file that has been modified while you're moving it. For example, if foo.xml has a Last Write

time of 01/01/2000 and you use MOVE foo.xml bar/ in the middle of the day, you'll move foo.xml to bar/ on 01/01/2000. If you want to avoid this possibility, create the file in bar, delete it, and move the
